**What we know – what
we expect (to drive the
change)**

4 levels of industrial revolution – an overview

Englisch ??

Vier Stufen der Industriellen Revolution

Die vernetzte Produktion organisiert sich vielfach selbst. Ihr Schmierstoff ist Information: Sie gibt Maschinen vor, wie sie sich für einen Auftrag organisieren sollen.

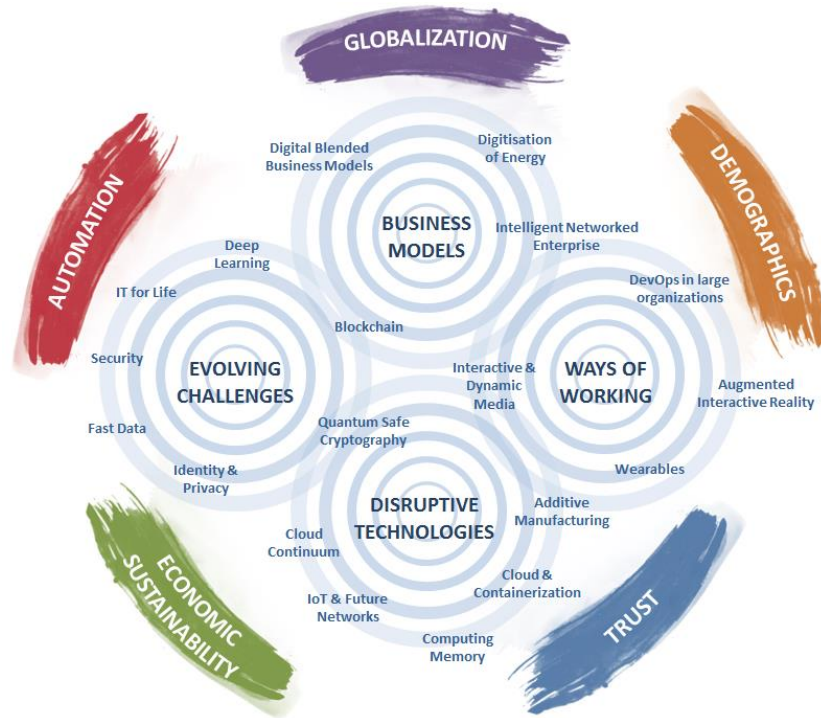

Industrie 4.0

- | | |
|-------------------------|------------------------------|
| 1. Interdisziplinarität | 8. Internet der Dinge |
| 2. Soziale Medien | 9. Internet der Dienste |
| 3. Mobile Computing | 10. Assistenzsysteme |
| 4. Virtualisierung | 11. Cyber Physical Systems |
| 5. Smarte Objekte | 12. Smart Factory |
| 6. Big Data | 13. 3D-Printing |
| 7. Analyse, Optimierung | 14. AI – Künstl. Intelligenz |

Our Vision

Digital disruption

Business models – through new sources of business value and partnership, driven by data and connectivity.

Ways of working – resulting from changes in Business processes and the very nature of work.

Disruptive technologies – the developments that bring revolutionary changes to the “art of the possible” not just evolution.

Evolving challenges – familiar challenges that need to be addressed with different perspectives as a result of the emergence of new influences.

HR 4.0 – need to change? Need to continue?

Job	Tool	Future?
Taxidriver	Mobile Computing, IoT	  
(truck) Drivers	Driving assistent	 
Delivery Service	IoT, assistance	 
Customer service	IoT, AI, VA...	 
Retail	Onlineshopping, IoT...	
...

Consequences?

Impact will be on the both ends of the Job market:

High paid specialists:

- ✓ Experts
- ✓ Managers
- ✓ Leaders
- ✓ Consultants

low paid workers:

- ✓ Easy tasks
- ✓ Low knowledge
- ✓ scalable

...brings risks & chances

- Freedom to act
- Development
- Work life balance
- New business models
- Reduced working hours

- Stress
- Change as norm
- Low transmittance
- Job cuttings in production
- Need for qualification

Future Skills

Which Competencies are needed?

Technical Specialists
e.g. Big Data Analysts,
Robotik-Developer etc.

Challenges at the top:
All industries highly need specialists dealing with transformative technologies. Labour market is short on these resources.

Digital Key-Qualifikationen
e.g. digital Learning, Data Library, Colaboration, etc.

Non-Digital Key-Qualifikationen
e.g. Ability to adapt, Entrepreneurship, etc.

Challenges breadthwise:
New ways of working need a new set of qualifications from all staff.

Career Management > skill development

- ▶ Based on individual experience
- ▶ Each individual has to select two skills:
 - Current skill represents the core skill that is needed for day to day delivery
 - Future skill represents the area where the employee wants or needs to develop to be ready for a future opportunity
- ▶ Manager as a coach

Skills Acquisition & Development

- ▶ **Skills Acquisition Plan** contains a set of **technical, business and soft skills** that the employee needs to develop for his/her present position or for his/her future development.
- ▶ The **Skills Acquisition Plan** is based on a limited Strategic Skills list selected by Atos **based on future customer needs, market trends, Atos strategy and expecting growth areas** in the mid-term future.

Conclusion

Zusammenfassung zum Ende des Vortrages noch mal machen

Change is everywhere and requires a joint effort from companies, individuals and society.

Ways of working **challenges** a diverse set of qualifications from all staff.

For many companies a **transformation** process is necessary. It is not limited to technology but also to people management

The company remains a melting pot of **competencies** (especially creativity, problem solving).

The individual contributor (=> **employee**) has to take into account, how he can add value to the company.

Companies need to create an environment that supports the demands of the future.

Thank you very much
